

A service representative will first help you determine the number of cameras and the camera positions within your facility. All necessary equipment and cameras are then installed during scheduled hours as to not disrupt your ongoing classes. Once the equipment has been installed and your **FREE WEBSITE** is complete, parents and other authorized users will access the video by logging in through a secure form on your site.

The video is streamed from your facility to your website where it can be accessed by authorized users of the KidsVision system. There is no special software to install. After you approve a parent's login information, it is entered into the KidsVision system. Immediately the authorized user will have access to the online streaming video. The user simply browses to your web address (ex. www.abcd daycare.com) and logs in. The usernames and passwords are encrypted to provide additional security from unauthorized access.

The KidsVision online video can be accessed from any computer with an Internet connection and standard web browser. Parents and providers can view the video from home, work, or while traveling. It's that simple.
